DATA ANALYTICS

BRANCH : CSE

Time : 3 Hours

Max Marks : 100

Q.CODE : C1147

Answer Part-A which is compulsory and any four from Part-B.

The figures in the right hand margin indicate marks.

Answer all parts of a question at a place.

Part – A (Answer all the questions)

Q1 Answer the following questions: *multiple type or dash fill up type:* (2 x 10)

- a) Data Analysis is a subcomponent of Data Analytics. Right/Wrong
- b) “A person interested to buy a laptop may also interested for Backpack” belongs to _____. Association rule learning/Clustering/supervised learning
- c) RSS stands for _____.
- d) Rosenblatt Perceptron is an algorithm for _____. Supervised Learning/Unsupervised learning/ Multiple Learning.
- e) Logistic regression is used for _____. (Classification problem/regression problem/ clustering problem/non of these)
- f) The day by day analysis of the effect of drug upon a mad person belongs to _____ learning.
- g) Decision trees where the target variable take discrete values are called regression trees. Right/Wrong
- h) Bootstrap method is generally used when data set is small. Right/Wrong
- i) Boosting is used for _____. Reducing bias and variance/Incrementing bias and variance/synchronization of network
- j) T-tests can be used to compare two means to assess whether they are from the same population. Right/Wrong

Q2 Answer the following questions: *Short answer type:* (2 x 10)

- a) What is Data analytics ? Explain.
- b) Define variance.
- c) Explain ridge regression ? Why it is essential ?
- d) How the weights of the inputs for an ANN can be determined ? Explain.
- e) What do you mean by multicollinearity ? explain.
- f) Explain few challenges of big data analytics.
- g) What is the role of kernel machine ? Explain.
- h) In k-means algorithm how the centers of the clusters initialized ?
- i) What is the necessity of back propagation in fitting a neural network.
- j) What do you mean by bagging ?

Part – B (Answer any four questions)

Q3 a) What is the difference between Supervised and Unsupervised Learning? Explain briefly. (10)

- b) What is clustering ? Give an example where clustering can be used and write the k-means clustering algorithm. (5)

- Q4** a) Explain the role of SVM in machine learning. When it is essential ? Explain the linier classifier in relate to SVM. (10)
 b) What is the objective of Bootstrap method ? How it is different from cross validation, Explain. (5)

- Q5** a) What is Lift ? How it is related to Association rule ? Calculate the lift for the following data set. (10)

(i) Lift (A → 0)

(ii) Lift (B → 1)

Antecedent	Consequent
A	0
A	0
A	1
A	0
B	1
B	0
B	1

- b) “The Higher the Bias the Lower is the variance and vice versa” Explain the statement with a suitable diagram taking X as the independent variable and Y is the dependent variable. (5)

- Q6** a) Define “ensemble learning”. How it is related to Random forest ? Give an example with at least three learning parameters to explain an analysis of a medical patient. (10)

- b) What is subset selection and why it is essential ? Write the best subset selection algorithm and state its limitation. (5)

- Q7** a) Describe the McNemar’s test and k-fold cross validated paired t-test to compare whether two given learning algorithms construct classifiers that have the same expected error rate. (10)

- b) The following table provides a training data set with six observations, three predictors and one dependent variable (5)

Obs.	X ₁	X ₂	X ₃	Y
1	0	2	0	Red
2	2	0	0	Red
3	0	1	3	Red
4	0	1	2	Green
5	-1	0	1	Green
6	1	1	1	Red

Predict the value of Y when X₁ = 0, X₂ = 1 and X₃ = 1 using K-NN classifier with K=3.

- Q8** a) Consider two one-dimensional, Gaussian-distributed classes and that have a common variance equal to 1. Their mean values are (10)

$$\mu_1 = -10$$

$$\mu_2 = +10$$

These two classes are essentially linearly separable. Design a classifier that separates these two classes.

- b) Explain the various components of a Neural Network. (5)

- Q9** a) Write a short note on following data sets (10)
 (i) California housing (ii) NewZealand fish

- b) What is Bigdata ? Describe the main features of a data analytical system. (5)
